

Beck/Arnley Oxygen Sensors

Reduce Pollutants & Improve Gas Mileage

Oxygen Sensors are important in reducing harmful pollutants and improving a vehicle's gas mileage. Beck/Arnley's line of oxygen sensors are made from the highest quality materials that meet or exceed their OE counterparts.

Features

1 100% Quality tested

- Air tightness
- Continuity
- Heater resistance

2 Vented to OE standards to allow top performance of sensors while protecting the cone.

Beck/Arnley Match to OE

- ◆ Connector function and design
- ◆ Thread size
- ◆ Wire insulation
- ◆ Heated and Unheated sensors match to OE
- ◆ Hex size of the body
- ◆ Response Time – meets OE specifications
- ◆ Ohms – meets OE specifications

Additional Benefits

- Flange style - the gasket is attached to the flange, so there's no need to have an additional gasket in the box.
- A number of our oxygen sensors have a crimped clamp over the insulation at the base where the wire exits the body. This keeps the wire totally insulated.
- The 5" wire length rule will reduce your number of parts on the shelf, while maximizing your confidence that our consolidations are reasonable for your customer. Eliminate the concern that the customer will have an extra 18" of wire on their particular applications.
- We offer nearly 600 oxygen sensors.
