Brake Pad Sensors & Wires

Features & Benefits

- Applications range in years from 1975 to 2007.
- Sensors and wires operate in a harsh environment that requires regular inspection and should be replaced when the brakes are serviced.
- This **safety feature** sets off a warning light when the brake pad is as close as 0.2 mm to the minimum thickness.
- The proper operation of this system is not only a safety concern but also may affect the handling of the vehicle and prevent expensive brake damage.
- This product features synthetic materials of the highest quality such as polyimids (heat and chemical resistant polymers) to withstand the extreme temperatures, up to 1472 degrees Fahrenheit (800 degrees Celsius).
- Silver plated pins are used to avoid corrosion and manufactured to close tolerances for accuracy.
- Precise wear warning points are implemented according to the requirements of the car manufacturers.
