Parts Made Right. Life Made Easy.™

Reman Alternators & Starters

Alternators

Beck/Arnley's Reman Alternators Have:

- New bearings with high temperature seals and grease for quiet, vibration-free, long life even under extreme operating conditions.
- New brushes for extended life and reliability.
- New clutch/de-coupler pulleys for durability and reliable performance.

In Addition:

- Regulators are 100% tested to ensure proper operation and operating voltage.
- Rectifiers are 100% tested to ensure proper charging performance and a long service life.
- Rotors and stators are 100% tested electronically for output and insulation integrity to ensure maximum output and service life.
- Slip Rings are replaced or remachined to within .005 run-out for maximum brush contact and longer life.
- Cases are polished, coated, or plated. Mounting threads are re-taped for easy installation.

All alternators are clocked for specific vehicle applications for exact fit, never modified.

100% tested at high and low speeds. Output is guaranteed to meet or exceed OE specifications.

Starters

Beck/Arnley's Reman Starters Have:

- New bushings/bearing lubricated with extreme temperature grease for performance and extended service life.
- New springs and brushes to ensure extended service life and reliability.
- New gaskets, wires, and leads for extended life and durability.

In addition:

- All drives are remanufactured with new springs and extreme temperature grease.
- Armatures and commutators are remachined or replaced and electronically tested for consistent starting performance.
- Solenoid contacts are resurfaced or replaced with new to ensure positive starts every time.

All starters are exact fit units, re-engineered to improve performance when required.

HP/KW ratings are guaranteed to meet or exceed that of the OE unit, with all necessary terminals, insulators, and hardware provided. 100% load tested at high and low speeds.
