

Beck/Arnley

Timing Kits

All The Components You Need To Get The Job Done

Installing timing components is not cheap, fast, or easy. It can be a complicated and expensive proposition. Having all of the correct components at hand to complete a timely repair is essential. Beck/Arnley timing kits can provide those timely organized essential repairs with a single purchase accelerating pull time from shelf to job site and installation.

*Do the job right
the first time!*

Features

- We offer over 40 kits in the 029-1000 series.
- Includes timing belt and tensioner(s) needed for a specific application.
- Available as a kit for the complete job or individual repair components.
- Top quality direct OEM style form, fit & function replacement kit components.
- Recommended by the OEM manufacturer.
- Kits do not contain springs.

Benefits to the Installer

- Saves **time & money** for the shop by preventing costly comebacks and warranties.
- Reduces labor claims.
- Results in a more **complete repair** for your customers.
- Preventative maintenance and repair can be accomplished simultaneously.
- **Saves time** on component look-up.
- Not necessary to multi-source components.
- The internal tensioner bearing wear is not noticeable via inspection, and a failed tensioner bearing often causes timing belt failure. A broken timing belt can cause severe to catastrophic engine damage.
